

Hoofdstuk	Titel	Slide nummer	Note nummer	Post-it nummer
Introduction	General formula	1	1	1
	Important biomolecules are polymers	2	1	
	- Proteins: Amino acids	3	1	
	- Polysaccharides	3	2	
	- Nucleic acids	4	2	
	- Lipids and membranes	4	2	
	Energy	5	2	
	Cell types	5	2/3	
Water	Properties & H-bond	9	4	2
	Nob-covalent bonds	10	4	
	Ionization of H <sub>2</sub> O & pH scale	12	4	
	Acid dissociation of weak acids & Buffers	13	5	
Amino acids and the primary structure of proteins	General structure of amino acids	15	6	3
	Structure of the 20 most common amino acids	16	6	
	Ionization of amino acids	18	6	
	Peptide bonds	19	7	
	Protein purification techniques	19	7	
	- Sample preparation	19	.	
	- Detection during purification process	20	.	
	- Liquid chromatography	20	.	
	- Purification strategies	23	.	
	Amino acid composition of proteins	23	.	
	Determining amino acid sequences	23	.	
	Protein sequencing strategies	24	.	
	Comparisons of the primary structures of proteins	27	.	
Proteins: 3D structure and functionality	Four protein levels	29	.	4
	Methods for determining protein structure	29	.	
	Conformation of the peptide group	30	.	
	Alpha-helix + Beta-strands/sheets	31	.	
	Loops and turns	32	.	
	Tertiary structure	32	.	
	- Supersecondary structures	32	.	
	- Domains	33	.	
	- Domain structure and function	34	.	
	Quaternary structure	34	.	
	Protein denaturation	34	.	
	In-vivo protein folding and stability	35	.	
	- Hydrophobic effect	35	.	
	- Hydrogen bonding	36	.	
	- vdW & charge charge interactions	36	.	
	- Protein folding is assisted by chaperones	36	.	
	Collagen – a Fibrous protein	36	.	
	Antibodies bind specific antigens	38	.	
Carbohydrates	Structure of basic carbohydrates	39	11	5
	Cyclization of aldoses and ketoses	43	12	
	Conformations of monosaccharides	44	13	
	Derivatives of monosaccharides	45	14	
	- Sugar phosphates	45	14	
	- Deoxy sugars	45	14	
	- Amino sugars	46	14	
	- Sugar alcohols	46	14	
	- Sugar acids	46	14	

	Disaccharides and other glycosides	48	16	
	- Structures of disaccharides	48	16	
	- Reducing and nonreducing sugars	48	16	
	- Nucleosides and others	49	16	
	Polysaccharides	49	17	
	- Starch and glycogen	50	17	
	- Cellulose and chitin	50	18	
	Glycoconjugates	51	18	
	- Proteoglycans	51	18	
	- Peptidoglycans	52	18	
	- Glycoproteins	53	19	
Lipids	Structural and functional diversity of lipids	55	21	6
	Fatty acids	55	21	
	Triacylglycerol	57	22	
	Glycerophospholipids	58	22	
	Sphingolipids	59	23	
	- Eicosanoids	60	23	
	Waxes	61	23	
	Isoprenoids (steroids)	62	23	
	- Cholesterol	62	23	
	- Cholesterol esters	63	23	
	Biological membranes	64	24	
	- Lipid bilayer			
	- Fluid mosaic model			
	Membrane proteins	65	.	
	- Integral membrane proteins			
	- Peripheral membrane proteins			
	- Lipid-anchored membrane proteins			
	Membrane transport	66	.	
	- Pores and channels	66		
	- Passive transport	66		
	- Active transport	67		
Structure and synthesis of nucleic acids	Nucleic acids	69	.	7
	DNA	70	.	
	- Supercoiling	71		
	- Chromatin & nucleosomes	71		
	RNA	72	.	
	- Hydrolysis of RNA	73		
	- Restriction enzymes	73		
	DNA applications	74	.	
	DNA Replication	74	.	
	- Prokaryotes: polymerases / replication fork / Okazaki fragments / ligase	75		
	- Eukaryotes	77		
	Sequencing	78	.	
	Repair of damaged DNA	78	.	
	Excision repair	79	.	
	Homologous recombination		.	
Transcription & RNA processing	RNA polymerase (RNAP)	83	.	8
	Transcription initiation	84	.	
	Transcription termination	86	.	
	Transcription in eukaryotes	86	.	
	Transcription is regulated	87	.	
	The lac operon	88	.	
	Bacterial RNA processing	90	25	
	Eukaryotic RNA processing	90	25	

Protein synthesis	The genetic code	92	26	9
	tRNA	93	26	
	Aminoacyl-tRNA-synthethases	94	27	
	Ribosomes	94	27	
	Initiation of translation	95	27	
	Protein chain elongation = 3-step microcycle	96	28	
	Termination of translation	97	28	
	Protein synthesis = energetically expensive	98	.	
	Regulation of protein synthesis	98	.	
	Post-translational processing	99	.
